

5.3. THE ORGANIZATIONAL PLANNING

5.3.1 Census Zoning

In August – September, 2015 the NSS NKR regional departments prepared and implemented NKR 2015 Population Census preparation and conduction organizational planning (from now on orgplan) by Stepanakert city and NKR regions based on lists of houses (buildings) and rural residences, corresponding cartographic data as well as overwork norms, defining:

- Boundaries of census, supervisory and enumeration areas in territories (Population Census zoning)
- Therein necessary census personnel number, requitement, training, instruction and preparedness check terms
- Planning of Population Census conduction mass-explanation arrangements among population.

Population Census organizational plan was realized by heads of the NSS NKR subdivisions together with census operations coordinators according to corresponding provisions defined by normative acts. Population Census zoning was based on listing data, schematic layouts and territories maps of towns and big villages as well as normatives defined for census areas.

The whole territory of the Republic was divided into 9 census, 90 supervisory and 501 enumeration areas according to summary organizational plan of NKR 2015 Population Census.

Number of de facto formed areas is reflected in schematic image N1.

Schematic image shows that the whole territory of the Republic is divided into 5 platforms according to principle of vertical subordination. Credentials and responsibilities defining normative documents were drafted and put into an action for each platform subordinations directing to raise selfregulating level of lower platforms subdivisions for «easing» overload of higher platform subdivisions operative process.

Above described was contributed for productivity of higher platform controlling-supervisory credentials.
