**Brief Description of the Methodology of Consumer Price
Monitoring and Calculation of Index in the National Statistical
Service of AR**

In accordance with the requirements of Methodology of the Calculation of Consumer Price Indexes the specific weights of consumer goods and services, as well as base year for CPI calculation should be periodically reviewed according to the results of Integrated Living Conditions Survey (sample).

Since January 2018 the base period for CPI calculation is considered December 2017. Taking into account the results of Integrated Living Conditions Survey (sample) carried out in the Republic of Artsakh from October 2018 to September 2017, as well as price changes for each good and service during the period from October 2016 to December of 2017, the recalculation of specific weights of representative goods and services included in the consumer basket was implemented in January 2018.

The total number of the observed goods and services for CPI calculation remained unchanged – 417. At the same time, the recalculation of the specific weights for 7 settlements observed in AR was conducted, which was based on de-jure population number and regional indicators of 2017 on the volumes of goods turnover and services.

Due to the above-mentioned methodological changes in the calculation of consumer price indexes, the price indexes of January-February, 2018 have been recalculated.
